Education

Keshav Mahavidyalaya, Delhi University – B.Sc. (H) Electronics

May 2027

Experience

Full Stack Web Developer Intern, Techplement

Jan 2024 – Feb 2024

- Engineered a **full-stack web application prototype** (React + Express) architected to scale for **1,500+ users**, improving projected engagement by **35%** through responsive UI and optimized API handling.
- Resolved **backend instability during stress testing** by optimizing **Express middleware flow and database query execution**, enabling reliable handling of **200+ concurrent simulated users**.
- Improved system resilience by refining **API route efficiency and database access patterns**, eliminating server crashes under peak test loads.

Marketing Intern, SecureDApp

Aug 2025 – Sep 2025

- Organized and executed 5+ marketing events**, increasing audience engagement by **30%** through improved planning, coordination, and post-event follow-ups.
- Faced low client response rates (Challenge); **personalized LinkedIn, email, and Twitter outreach** (Action); boosted qualified lead conversions by **25%** (Result).
- Situation: Limited brand visibility in the Web3 market; Action: Developed targeted social media strategies; Result: **Expanded follower base by 15%** within one quarter.

Projects

Testeefy

<https://github.com/namit-seth/testeefy>

- Architected and built **Testeefy**, a **Flask + SQL full-stack exam automation system**, reducing manual grading effort by **80%** through automated evaluation logic.
- Designed a **question bank and result analytics dashboard**, enabling instant performance insights and error-free scoring.
- Streamlined test administration workflows by automating **test creation, submission handling, and grading pipelines**.

EVM

<https://github.com/namit-seth/EVM-V2>

- Built a **microcontroller-based voting system** with secure vote casting and live tallying, eliminating manual counting errors through **real-time digital tracking**.
- Enhanced user transparency by integrating a **16x2 LCD interface** for instant vote confirmation and live totals.
- Strengthened input reliability by implementing **multi-button press detection and debouncing logic**, preventing false vote registrations.

DS1302 Arduino Library

<https://github.com/namit-seth/DS1302>

- Developed a **lightweight RTC driver library** for the DS1302 module using **bit-banged serial communication and register-level control**.
- Implemented **burst read/write operations, clock halt handling, and write-protection logic** to ensure corruption-free timekeeping.
- Optimized for **low memory footprint**, enabling stable deployment in resource-constrained Arduino systems.

Skills & Concepts

- Languages** : HTML, CSS, JavaScript, Node.js, Express.js, REST APIs, SQL, Arduino (C/C++), Python
- Digital Electronics, Analog Electronics, Sensor Interfacing, Serial Communication(SPI, I2C), MicroControllers, MicroProcessors
